

# The Equisol range is now at Coffs Harbour Hardwoods

## LET'S TIMBER BREATHE

Equisol is your super weapon against the harsh Aussie climate, and Coffs Harbour Hardwoods have all the expertise to help you restore and protect your exterior timber. Equisol is a professional non-film forming, stabilising oil that penetrates into the timber, allowing moisture and heat to escape, whilst retaining the natural grain and feel of wood. No film. No shine. No fuss.

### AUSTRALIAN MADE FOR THE HARSHTEST ENVIRONMENT. RIGHT HERE.

Tested in harsh Australian subtropical rainforest climates, Equisol's moisture control penetrant technology allows timber to breathe, by letting water get in and out again.

Its environmentally-friendly linseed oil base is formulated with mould and algae inhibitors to resist mould growth while nourishing and preserving the timber, and controlling the effect of sunlight exposure with enhanced UV absorbers.

Use the full Equisol protection system to prepare new and unseasoned timber, clean and brighten previously oiled timber for a new coat, or kill mould, algae, moss and lichen on many different surfaces.

Easy application and maintenance with no cracking, peeling or blistering.

### 6 ARCHITECT COLOURS OR CLEAR

For rich colour that maintains natural timber character without shine, add a Colour Tone to Equisol Pro E365 clear oil and mix through before use.
